ITCH!

A WAR-TIME ILL THAT'S SPREADING
HUNT'S SALVE CURES IT!

BRED in the war trenches of Europe, a wave of ordi-
nary ITCH is spreading over the country. This skin
disease, history shows, has always prevailed, following
wars and the concentration of armies. It was common
during the Civil War and following that conflict. There
was an epidemic of the Itch after the Spanish-American
War. Now history is repeating itself after the great
European struggle.

Returned soldiers and those with whom they come in
contact will find a recognized remedy for the Itch in
Hunt's Salve, commonly known as "Hunt's Itch Cure."

Many a veteran of the late '30's will testify to its merits.
If directions are followed HUNT'S SALVE will
prove a never failing cure for all forms of the Itch, and
your druggist will tell you so. He sells HUNT'S SALVE
under a strict guarantee to refund the purchase price to
any dissatisfied user.

A Medford, Oklahoma man, among thousands who
praise HUNT'S SALVE says:

"Some people dislike to call it the Itch, but candor compels me to admit
I had it badly. Your Hunt's Salve, however, cured me after many other
remedies had totally failed. One box completed the cure—the first application
afforded wonderful relief. My advice to those who have to scratch, is to
use Hunt's Salve."

Hunt's Salve is especially compounded for the treatment of Itch, Eczema,
Ringworm, Tetter and other itching skin diseases and is sold on our guarantee
by all reliable drug stores, or it will be sent direct by mail if your local druggist
cannot supply. Price 75c per box.

A. B. RICHARDS MEDICINE COMPANY, INC.,

SHERMAN, TEXAS.

WILLING TO STRIKE BARGAIN WANTED IT AS A WARNING

Wife Quite Ready to Abandon Style
if Her Hubby Would Only Do
His Part.

She was one of those dressy women
who always wear the latest thing,
whether it suits her or not.

One day her hat touched her nose;
next week it rested on the back of her
neck. Her last frock barely covered
her shoe tops, her new ones huddled
round her ankles. Oh, she was always
"it!"

Her husband was no passive resist-
er. Regularly he raised his voice in
protest at each craving after fashion.
But the one thing that really annoyed
him was when she suddenly scraped
her hair straight back from her fore-
head on top and trained it down like
window curtains on each side of her
face.

"Look here!" he said in exaspera-
tion. "Can't I induce you to stop
wearing your hair over your ears?"
"Certainly!" she replied, with a
charming smile. "Buy me diamond
earrings."

The Likeness.

"The fine new house that promoter
has built himself is standing on a
bluff." "So is he."

The good intentions ground out by
political machines ought to make ex-
cellent paving material.

Old Gentleman Had Particular Use
for That Peculiarly Atrocious-
Looking Beetle.

On the counter of the Christmas
bazaar stood all the usual horrors
which an unscrupulous world insists on
giving the poor kiddies as "toys."
There were animals, birds and insects
which resembled nothing save the
creatures of a particularly fierce night-
mare.

The customer steadied himself by a
chair and, after a careful selection,
picked up one specially terrible beetle.

"I'll take that," he told the assistant.

"How much is it?"

"Half a dollar!" replied the girl.

"Is it for your little boy?"

"No; I want to take it to a dinner
party I have to attend."

"Whatever for?" exclaimed the girl,
surprised out of her carefully acquired
calm.

"Well, I'm going to stand it in front
of me on the table when the drinks
are going round and when I see two
beetles—well, it's time to go home!"

Open Bribery.

Jane had just commenced school,
and the teacher asked her a question
in numbers which she was unable to
answer. She walked up to the teach-
er and said in a low voice: "If you
won't ask me that I'll give you some
of my animal crackers."

EFFICIENCY OF ILLINOIS FARMS COMPARED

(Prepared by the United States Depart-
ment of Agriculture.)

The relative efficiency of plows of
different sizes, the value of the tractor
equipped with horses, the saving ef-
fected by corn binders, hay loaders,
and numerous other implements, and
other facts bearing on farm manage-
ment are discussed by specialists of
the office of farm management, in a
bulletin recently issued. The publica-
tion discusses in detail the standard
day's work in central Illinois; that is,
the amount of work that the 600 farm-
ers included in the investigation ordi-
narily do in that part of the work day
devoted to a given farm operation,
such as the number of acres plowed
with a given equipment. In some in-
stances the rate of work is given in
the bulletin in number of minutes per
load, as in loading and unloading hay,
or hauling and spreading manure.

From the figures published one may
get a good idea of the rate at which
different farm operations are done in
the parts of the corn belt in question.
For example, it is shown that one man
does from 70 to 80 per cent more with
the 28-inch horse-drawn gang plow
than with the one-bottom 16-inch plow.

Figures are given for spring and fall
plowing, harrowing, planting, cultivat-
ing, harvesting, husking, seeding, un-
loading ear corn, unloading oats, load-
ing and unloading hay, and hauling
and spreading manure. The bulletin
is entitled "The Standard Day's Work
in Central Illinois." Copies may be
had by addressing the United States
department of agriculture, Washing-
ton, D. C.

The farms represented by this in-
quiry are fairly typical of those
throughout the middle western states,
since the average crop area is 167.4
acres and an average of 32.1 acres is
never planted to crops. Corn is the
principal product, at least one-half of
the crop area being devoted to it, and
the oat crop is second in importance.
The ground cultivated in most in-
stances is level, and so represents eas-
ier working conditions than rolling off
rugged country.

The average time spent in the field,
exclusive of the time used in going
to and returning from the field, at
morning, noon, and night, is reported
by these men as ten hours and ten
minutes per day devoted to spring
field work and corn cultivation; nine
hours and 55 minutes for haying, and
grain harvesting; nine hours and 30
minutes for fall plowing and preparing
ground; and nine hours and 20 min-
utes for corn harvest.

Important Facts Emphasized.

Among the significant facts brought
out by this inquiry may be mentioned
the following:

Under conditions where the use of a
two-row corn cultivator is practicable,
this machine enables one man on these
farms to cover nearly twice as much
ground per day as with a one-row cul-
tivator. Three horses are most com-
monly used on the two-row cultivator
and the addition of a fourth horse ap-
parently increases but little the amount
of ground covered per day.

These farmers find that the use of
a corn binder increases the efficiency
of man labor 50 per cent over that
achieved when cutting and shocking by
hand.

Eighty bushels was an average day's
work on these farms for one man when
husking corn from the standing stalk
by hand.

The use of a portable elevator re-
duces the time required to unload grain
into the bin by about 75 per cent.

The use of a hay loader reduces by
about 25 per cent the time required to
put on a load of hay. The amount of
labor required for unloading into the
mow is only a little more than half
as great when a hayfork is used as
when the work is done by hand.

The men in this territory who use
manure spreaders haul and spread a
given amount of manure in less than
half the time required by men who

haul in wagons and spread by hand.

A large majority of the men report-
ing broadcast their small grain, using
endgate seeders attached to the
box of an ordinary wagon. Only about
25 per cent of the farmers reporting
own grain drills.

The bulletin analyzes each field op-
eration from the standpoint of man-
labor requirements, horse-labor re-
quirements, size of machine, etc. The
manner in which the data on plowing
have been summarized is typical of the
way in which several subjects are
treated. About 80 per cent of the
farmers reported the use of sulky
plows, about 80 per cent stated that
they use horse-drawn gang plows, and
14 per cent reported the use of tractors
for plowing.

16-Inch Sulky Plows Popular.

A large majority of the farmers use
16-inch sulky plows, nearly all of
them with three horses in the spring.
Three acres is an average day's work
for this outfit. For the comparatively
few farmers using 14-inch sulky plows
with three horses in spring, plowing
about three acres is an average day's
work. While theoretically the 16-inch
plow should cover about 15 per cent
more ground in the same length of
time, this apparently has not been
found true in practice.

Four-Horse Teams Preferred.

The greater number of four-horse
teams and even some five-horse teams
on 14-inch sulky plows for fall plow-
ing is accounted for by the fact that
plowing in the fall is usually about one
inch deeper than in the spring, and
also by the fact that the ground is gen-
erally dry and hard to turn. On an
average, outfits of the same size cover
about a half acre less per day in the
fall than in the spring, due not only
to the more difficult conditions men-
tioned above, but also to the fact that
the time spent in the field is about two-
thirds of an hour less per day in the
fall.

As is the case in spring plowing, the
14-inch plow seems to cover practi-
cally as much ground per day as the
16-inch size, provided both are drawn
by the same number of horses. The
addition of the fourth horse increases
the efficiency of the unit by about 10
per cent and the addition of the fifth
horse to the 16-inch plow results in a
similar increase. Excepting under
favorable conditions, a sulky plow
seems to be somewhat of an overload
for three horses of the size and type
used on these farms.

Many Gang Plows Used.

Over 450 men reported using horse-
drawn gang plows on their farms.
About 80 per cent of these plows have
14-inch bottoms. Most of the remain-
ing plows have 12-inch bottoms. Some
plows with 13-inch bottoms were re-
ported, but the number was so small
that no figures on their performance
are given. Over three-fourths of the
men who use gang plows also reported
the use of sulky plows.

A comparison of an average day's
work for 16-inch sulky plows and 28-
inch gang plows shows that so far as
horse labor is concerned the gang plow
drawn by four horses is the most ef-
ficient unit in both spring and fall. In
the spring this outfit covers one and a
quarter acres per day per horse, while
both the sulky plow drawn by three
horses and the gang plow drawn by five
horses cover one acre per day per
horse.

In the fall four horses with the gang
plow cover 1.02 acres per horse, while
three horses on the sulky plow and
five horses on the gang plow cover .88
acre and .91 acre per horse, respec-
tively. Four horses on the sulky plow
and six horses on the gang plow cover
.72 and .78 acre per horse, respectively.
The 28-inch gang plow is a somewhat
heavier load for six horses, the most
popular-sized team used in the fall,
than is the 16-inch sulky for four
horses, but is a lighter load than the
16-inch sulky for three horses.

Constipation generally indicates disordered

A LETTER FOR WOMEN

From a Woman Whose Serious Ill-
ness Was Overcome by Lydia E.
Pinkham's Vegetable Compound.

Garnett, Kas.—"I first took Lydia E.
Pinkham's Vegetable Compound for a

complete nervous
breakdown follow-
ing the birth of my
oldest child. I got
up too soon which
caused serious fe-
male trouble. I was
so weak that I was
not able to be on my
feet but very little
and could not do my
housework at all. I
had a bad pain in my
left side and it
would pain terribly if I stepped off a
curb-stone. One day one of your book-
lets was thrown in the yard and I read
every word in it. There were so many
who had been helped by your medicine
that I wanted to try it and my husband
went to town and got me a bottle. It
seemed as though I felt relief after the
second dose, so I kept on until I had
taken five bottles and by that time I
was as well as I could wish. About a
year later I gave birth to a ten pound
boy, and have had two more children
since and my health has been fine. If
I ever have trouble of any kind I am
going to take your medicine for I give
it all the praise for my good health.
I always recommend your medicine
whenever I can."—Mrs. EVA E. SHAY,
Garnett, Kansas.
